

TASCAM[®]
TEAC PROFESSIONAL

202MKV

OVERVIEW

TASCAM's 202mkV dual cassette deck is the only choice for professional studios, houses of worship and other installations needing reliable cassette performance. The two twin-head decks can be used for recording or playback, and Dolby noise reduction is provided (types B and HX Pro). The 202mkV can be used as a normal or high-speed dubber, and even sync reverse dubbing is provided.

New on the mark V model are a return to zero feature and A-B repeat, which can playback a section of tape up to 20 times. Deck 1 still has $\pm 12\%$ pitch control, and a front panel microphone input is available for convenient recording. Rely on TASCAM's 202mkV for constant cassette recording you can mount in any rack.
